

Figure 1 is a line graph showing the relationship between the number of trials (x-axis, 0 to 100) and the number of correct responses (y-axis, 0 to 100). The graph displays eight curves representing different combinations of difficulty level (Easy, Control, Hard, Medium) and color (Red, Blue). A dashed horizontal line is drawn at y=50. The curves generally show an increase in correct responses as the number of trials increases, with the 'Easy, Red' curve showing the highest performance and the 'Hard, Blue' curve showing the lowest performance.

Difficulty Level	Color	Approximate Correct Responses at Trial 100
Easy	Red	~95
Easy	Blue	~90
Control	Red	~85
Control	Blue	~80
Hard	Red	~75
Hard	Blue	~70
Medium	Red	~65
Medium	Blue	~60
